Toronto

## Executive Summary

The Arthritis Society Training Program in "The Total Assessment of Rheumatoid Polyarthritis" was established in 1977 to train physiotherapists in the assessment and management of clients with rheumatoid arthritis. This program was evaluated in 1981 and a statistically significant learning effect was demonstrated over the six-week period for seven variables: presentation, history taking, physical exam, special problem identification, review of therapy, socioeconomic situation and global score. Therapists reported a high level of satisfaction with all components of the program.

In June 1992, a questionnaire was sent out to determine the long-term usefulness of the program, to identify those therapists still working in the field of rheumatology and to determine the need for a follow-up training program.

Questionnaires were sent to 212 therapists including 156 non-Arthritis Society therapists, who had attended the program between 1981 and 1992 and 13 current Arthritis Society therapists who had attended the course prior to 1981. The adjusted response rate was 75% when those who were deceased or were returned with address unknown were dropped from the denominator. Arthritis Society therapists (n=52) had a response rate of 95% and non-Arthritis Society therapists (n=93) had a response rate of 67%. Most respondents were still working in their profession and still treating people with arthritis. Arthritis Society therapists tended to have more years treating people with arthritis ( $p=0.056$ ) than non-Arthritis Society therapists.

Therapists were asked about their caseload characteristics. Approximately 30% of the non-Arthritis Society therapists reported over 10 visits per client with arthritis. In contrast, approximately 12% of Arthritis Society therapists reported an average of >10 visits per client.

Therapists were asked "**How valuable do you feel this course was for you in your management of people with rheumatic disease?**". Responses were scaled from 0 to 10 on a 10 centimetre line with end anchors of 'not very valuable' on the left and 'extremely valuable' on the right. The mean response was 8.55 cm and there was no significant difference between the responses of therapists currently working for the Arthritis Society and those who were not. All of the therapists said they used the skills taught and said they would recommend the course to a colleague. Most therapists indicated they changed their assessment and management of people with arthritis as a result of the course. Most indicated they trained other therapists and students in the new skills acquired. Non-Arthritis Society therapists were more likely to train other therapists ( $p=0.034$ ) and students ( $p=0.015$ ). Most had become more aware of available Arthritis Society resources and said the training enhanced their communication/interaction with other health professionals.

Most therapists reported that they were still using the core training program assessment skills (taking a history, completing a joint count and measuring grip strength). Over half of the therapists reported the continued use of management strategies more recently introduced into the course. Arthritis Society therapists were more likely to still be assessing grip strength, joint count, muscle strength and taking a history, part of their required assessment protocol.

Most respondents indicated they would be interested in attending a refresher course (71.7%). The top three areas of interest were fibromyalgia, fitness and education strategies.

Most non-Arthritis Society therapists were working in facilities that provided special programs or resources for people with arthritis. A listing of facility, location and services offered is appended.

In conclusion, most therapists were highly satisfied with The Arthritis Society Training Program. Most reported that they changed their assessment and management of people with arthritis following the course and trained other health-care providers and students in the use of these skills.

# THE ARTHRITIS SOCIETY, ONTARIO DIVISION TRAINING PROGRAM FOLLOW-UP

## Introduction

The Arthritis Society, Ontario Division, 'Training Program in the Total Assessment of Rheumatoid Polyarthritis', was originally established in 1977 to train physiotherapists in the assessment and management of patients with Rheumatoid Arthritis (RA). Preference is given to Arthritis Society therapists and others working full-time in the field of rheumatology. Participants are trained to: (1) recognize the signs of joint inflammation and damage; (2) conduct a complete medical history and case work-up; (3) present a complete case work-up to their peers; and, (4) interact effectively with rheumatologists and other members of rheumatology treatment teams. This program was evaluated in 1981 and a statistically significant learning effect was demonstrated over the six-week period for seven variables; presentation, history taking, physical exam, special problem identification, review of therapy, socioeconomic situation and global score ( $p < 0.005$ ). Therapists reported a high level of satisfaction with all components of the program.<sup>1</sup>

In June 1992, a follow-up survey was sent out to determine the long-term usefulness of the program; to identify those therapists still working in the field of rheumatic diseases, and to determine if there was a need for a follow-up training program. In a time where community resources are so important, this was also an opportunity to investigate the resources available within each trained therapist's institution.

## Methods

The questionnaire was developed by ACREU and Arthritis Society staff (Appendix 1). Questionnaires were sent to all participants who attended the training program between 1981 and 1992, since these attendance records and addresses were readily available. One hundred and fifty-six questionnaires were sent to physiotherapists (PT's), occupational therapists (OT's) and nurses (RN's) who were not currently employed by the Ontario Division of The Arthritis Society. Forty-three questionnaires were sent to current Arthritis Society PT's and OT's. Thirteen additional questionnaires were sent

1. Helewa AH, Smythe HA, Goldsmith CH, Groh J, Thomas MC, Stokes BA, Sugarman J. The Total Assessment of Rheumatoid Polyarthritis - Evaluation of A Training Program for Physiotherapists and Occupational Therapists: *Journal of Rheumatology*, 14:1, 87-92, 1987.

to current therapists who took the program prior to 1981. Responses were confidential for Arthritis Society therapists but not for non-Arthritis Society therapists. Questions included educational level, current work status, professional affiliation and specialty, the number of years spent treating people with musculoskeletal diseases (MSD), information about their current caseloads and services offered to people with arthritis. Individuals were also asked whether they were still using skills taught during the course and to indicate how valuable they felt the program was using a 10-centimetre visual analogue scale.

A questionnaire, covering letter and stamped return envelope were mailed to each participant. After one month, a follow-up phone call was made to each non-responding therapist.

Surveys returned to ACREU were entered in the SAS data entry program for analysis.

## **Results**

A total of 212 questionnaires were sent out; the overall response rate was 69.8%. Of the non-Arthritis Society therapists who didn't respond, 14 were returned with address unknown; one was deceased, resulting in an adjusted response rate of 75% (Arthritis Society therapists: 95%(n=52), non-Arthritis Society therapists: 67% (n=93).

### **Demographic Information**

Table 1 presents the demographic information for all respondents, Arthritis Society (TAS) therapists and non-Arthritis Society (non-TAS) therapists. Most were female physiotherapists still working in their profession and still treating people with arthritis or other MSD. Non-TAS staff were also treating other related musculoskeletal diseases within their caseloads in the fields of orthopaedics (49.5%), gerontology (24.7%), sports medicine (8.6%) and plastics (8.6%).

Arthritis Society therapists were more likely to have a diploma (48.1%) and be working part-time (44.2%).

TAS and non-TAS therapists were compared using t-tests. There were no significant differences between TAS and non-TAS therapists however TAS therapists tended to have more years treating people with musculoskeletal diseases ( $p=0.056$ ).

TABLE 1

## Demographics

	Total n=145	Non-TAS n=93	TAS N=52
Mean age (yrs)	39 (range 24-62)	36.9 (range 25-60)	42.9 (range 24-62)

Place of Work:			
Hospital: in-patient	23.4%	35.5%	1.9%
out-patient	27.6%	40.9%	3.8%
Rehab. Centre	7.6%	11.8%	
Private Practice	6.2%	9.7%	
Home Care	39.3%	10.8%	90.4%
University	4.1%	5.4%	1.9%

## Caseload Characteristics

Most non-TAS therapists (70.9%) reported that they were still treating people with arthritis in their current setting. Over half (55.4%) indicated that people with arthritis made up less than 25% of their caseload. Over half of the non-TAS therapists (56.0%) reported treating up to 25 people with arthritis in a month and approximately 30% reported averaging >10 visits per client. Approximately 66% of TAS therapists reported treating up to 50 clients/month and approximately 12% averaged >10 visits per client (see Table 2).

When TAS and non-TAS therapist caseloads were compared, more TAS therapists were treating children, young adults and seniors with arthritis than non-TAS therapists ( $p \leq 0.004$ ).

TABLE 2 Caseload Characteristics

	Total	Non-TAS	TAS
<i>No. of people with arthritis seen/month</i>	<i>n=114</i>	<i>n=66</i>	<i>n=48</i>
1-25	41.2%	56.0%	20.8%
26-50	28.1%	15.2%	45.8%
51-75	9.6%	3.0%	18.8%
76-100	4.4%	1.5%	8.3%
over 100	4.4%	6.1%	2.1%
missing	12.3%	18.2%	4.2%
<i>Average no. of visits per person</i>	<i>n=114</i>	<i>n=66</i>	<i>n=48</i>
1-5	29.9%	28.8%	31.3%
6-10	32.4%	21.2%	47.9%
11-15	7.9%	12.1%	2.1%
16-20	7.9%	12.1%	2.1%
over 20	7.9%	7.6%	8.3%
don't know	14.0%	18.2%	8.3%
<i>% of therapists treating:</i>	<i>n=114</i>	<i>n=66</i>	<i>n=48</i>
paediatrics	39.5%	18.2%	68.8%
young adult	71.1%	57.6%	89.6%
middle age	82.5%	77.3%	89.6%
seniors	81.6%	72.7%	93.8%

## Value of Training Program

Therapists were asked, "How valuable do you feel this course was for you in your management of people with rheumatic diseases?" Responses were scaled from 0 to 10 on a 10-centimetre line with end anchors 'not very valuable' on the left and 'extremely valuable' on the right. The mean response of the total group was 8.55 with a range of 0-10. TAS therapists scored a mean of 8.66 with a range 2-10, non-TAS therapists scored a mean of 8.49 with a range of 0-10.

## Impact of the Training Program

Table 3 presents the responses to questions about the impact of the Training Program. One hundred percent of respondents said they used the skills taught at the course and said they would recommend the course to a colleague. Most therapists said they changed their assessment (92.4%) and management (78.6%) of people with arthritis as a result of the course. Most indicated that they trained other therapists (73.8%) and students (71.7%) in the new skills acquired. Most had become more aware of available Arthritis Society resources (86.2%) and said the training enhanced their communication and interaction with other health professionals (91.7%).

Responses of therapists working for TAS were compared to those not working for TAS using the chi-square test, missing values excluded. There was no significant difference between the two groups except that non-TAS therapists were more likely to train other therapists ( $p=0.034$ ) and to train students ( $p=0.015$ ).

TABLE 3 **Impact**

Impact	Total n=145	Non-TAS n=93	TAS n=52
Used the skills	100%	100%	100%
Changed their assessment	92.4	91.4	94.2
Enhanced their communications with other professionals	91.7	89.2	96.2
Became more aware of TAS services	86.2	86.0	86.5
Changed their management	78.6	75.3	84.6
Trained therapists	73.8	79.6	63.5
Trained students	71.7	78.5	59.6

Therapists were asked, "Are you still using any of the following skills taught during the course?". Table 4 presents their responses. Most therapists were still using the core training program assessment skills (taking a history, completing a joint count, measuring grip strength). All Arthritis Society therapists were still taking a history and completing a joint count. Arthritis Society therapists were compared with non-TAS therapists using the chi-square test, missing values excluded. Arthritis Society therapists were more likely to still be using grip strength, muscle strength, joint count and history-taking skills.

The splinting, fibromyalgia, foot and psychosocial management skills were not offered in the early years of the course. Frequency of reporting the use of these skills was based only on those who attended these sessions. Most therapists were still using the following skills: psychosocial management (84.1%), foot management (81.4%), fibromyalgia (67.3%) and splinting (53.3%).

**TABLE 4** **Still Using Skills Taught?**

Topics	Total n=145		Non-TAS n=93		TAS n=52	
	% Yes*	N	% Yes*	N	% Yes*	N
Joint Count	84.1	145	75.3	93	100	52
Psychosocial Management	84.1	107	79.5	73	94.1	32
History Taking	81.4	145	71.0	93	100	52
Foot Management	81.4	113	71.2	73	100	40
Grip Strength	77.2	141	66.7	89	96.2	52
Fibromyalgia	67.3	113	55.3	76	91.9	37
Splinting	53.3	92	36.1	61	87.1	31
Muscle Strength	44.8	145	30.1	93	71.2	52

*\*Rates adjusted removing those for whom the course wasn't available*

## Refresher Course

Most respondents (71.7%) indicated they would be interested in attending a refresher course (TAS therapists: 86.5%, non-TAS therapists: 63.4%). Suggested content areas are outlined in Table 5.

The top three areas of interest were the same for both TAS and non-TAS therapists; fibromyalgia, fitness and education strategies.

**TABLE 5** **Topics for Refresher Course**

<b>Topics</b>	<b>Total (%) n=145</b>	<b>Non-TAS n=93</b>	<b>TAS n=52</b>
Fibromyalgia	37.9	36.6	40.4
Fitness	35.2	32.3	40.4
Education strategies	31.7	29.0	36.5
Management Strategies	29.0	29.0	28.8
Research	26.9	28.0	25.0
Juvenile Arthritis	24.1	18.3	34.6
Ankylosing Spondylitis	13.8	9.7	21.2
Hydrotherapy	12.4	9.7	17.3
Scleroderma	7.6	5.4	11.5
Splints/orthotics	7.6	5.4	11.5
Medications	5.5	3.2	9.6
SLE (Lupus)	4.1	3.2	5.8
Stress management	2.8	1.1	5.8

## Special Programs Offered

Non-TAS therapists were asked, "Does your place of employment provide special programs or resources for people with rheumatic diseases?". Most non-TAS therapists (62.4%) reported that their facility offered special programs for people with arthritis. The responses are listed in Table 6. The specific details (facility, location and service offered) are outlined in Appendix 2. ACREU included these services in the mapping of services for people with arthritis by public health unit for the province of Ontario.<sup>2</sup>

**TABLE 6** **Special Programs (Non-TAS)**  
(n=63)

Program	%	Program	%
RDU	47.6	Foot Clinic	23.8
Outpatient Services	69.8	Hand Clinic	30.2
Pool	61.9	Splinting	71.4
Group Education	57.1	Orthotics	58.7
Day Hospital	19.0	Home Visits	3.4
Social Worker	5.0	Psychologist	1.7
School Visits	1.7	Clinics	3.3
Camps	1.7		

## Conclusions

The majority of respondents were highly satisfied with The Arthritis Society Training Program. They would all recommend the course to colleagues. They had continued to use the skills they learned and the majority had trained other health-care providers or students in the use of these skills. Most were still using the core program skills of taking a complete medical history, and assessing joint count and grip strength. Over half of the therapists continued to use the management-related skills more recently offered in the program (foot management, splinting, identification of psychosocial issues, management of fibromyalgia). Most would be interested in taking a refresher course. The top three areas of interest were fibromyalgia, fitness and education strategies. Special programs for people with arthritis were identified and are listed in Appendix 2.

**Acknowledgements:** Thanks to Mea Renahan, Director of Professional Services for The Arthritis Society, Ontario Division Consultation and Therapy Service for development of the questionnaire and assisting with access to previous participants. Special thanks to Annette Wilkins for assisting with both data analysis and interpretation.

# APPENDIX 1

The Arthritis Society  
Ontario Division  
Training Program Review

Name \_\_\_\_\_

Sex: F M

Our records show that you attended the 2 week Arthritis Society Training Program on the Assessment of Polyarthritis in \_\_\_\_\_.

Is this information correct? yes no

If this date is wrong, please correct the date and continue the questionnaire.

If for some reason you did not attend the program, please return the questionnaire unanswered.

Please circle yes or no

1. After attending The Arthritis Society Training Program did you:

Use your new skills/knowledge? yes no

Change your assessment of people with arthritis? yes no

Change your management of people with arthritis? yes no

Train other therapists in these new skills? yes no

Train other students in these new skills? yes no

Have more awareness of available resources or expertise at The Arthritis Society? yes no

2. Did the program enhance your interaction/communication with the health care team ie general practitioners, rheumatologists or other health professionals? yes no

3.1 Are you still using any of the following skills taught during the course?

Modified Sphygmomanometer-----Grip strength yes no

Muscle strength yes no

Joint count (active and/or damaged) yes no

History taking for rheumatic diseases yes no

3.2 If offered during the time of your course, are you still using any of these additional skills:

Foot Management N/A yes no

Identification of psychosocial problems N/A yes no

Splinting N/A yes no

Fibromyalgia point count N/A yes no

4. Since taking the training program, approximately how many years have you spent treating people with musculoskeletal diseases? \_\_\_\_\_ years.

5. In your current setting are you treating/assessing people with rheumatic diseases? yes no  
If yes, please circle what % of your caseload is people with arthritis? If no, please go to question 7.

1 - 25%      26-50%      51-75%      76-100%

6. Circle age of current clients with rheumatic diseases - please indicate % of time spent with each group  
Not applicable      Paed.      Young Adult      Middle age      Senior  
0-16yrs      17-45 yrs      46-64 yrs      65+ yrs

% time spent with each group      \_\_\_%      \_\_\_%      \_\_\_%      \_\_\_%

7. Average number of people seen per month with a rheumatic disease \_\_\_\_\_

8. Average number of treatment visits per person with a rheumatic disease \_\_\_\_\_

9. If working with other musculoskeletal problems, please indicate specialty area:

Geriatrics      Orthopaedics      Sports Medicine      Plastics

Other (please specify) \_\_\_\_\_

10. Does your place of employment provide special programs or resources for people with rheumatic diseases?      yes      no

If yes, please circle all that apply:
